**Abstract:** Urban planning is becoming increasingly important for cities, people, and the environment. Urbanization in cities should occur along with urban planning efforts. in order to comprehend urban planning more deeply. Additionally, the idea of urban planning should be centered on taking into account everyone. Urban planning should therefore receive more attention. Therefore, the purpose of the research paper is to investigate how urban planning affects people's lives because urbanization without planning will not be a suitable response to meet people's requirements. Urban planning considers one of science that gathers set of the fields in one point. Management, Art, geography, ideology, psychology, Topography and more are collected in the same side because dealing with the environment that contains human being, animals, land, weather and anything can be seen in this world is very complicated, and it requires many attempts and huge data to get a typical solution.

**Keywords:** Urban planning, Urbanization, Topography, Urban Sprawl

## I. INTRODUCTION

The world is becoming more crowded every minute elapsed. Because of this rise in population demands of people are also increasing accordingly. Furthermore, these demands require people to get more urbanized. Urbanization, on the other hand, cannot be a solution to meet people's demands without planning because it may result in a fresh issue like urban sprawl. Therefore, urban planning is an emergence need for cities, people and also for the environment. The urban planning working should be taken simultaneously with urbanization in cities. In order to have deeper understanding about urban planning. Moreover, the urban planning concept should be focused taking all people in consideration.

The aim is to study the impact of urban planning in the lives of people and to do so, we need to understand the difficulties people face in their daily lives and what are the reason behind these difficulties. The main objective of this research paper is to analysis the importance of urban planning in people’s life and to understand the problems faced by people and the reason behind it. Nowadays, we see increasing and creating new areas to be small cities or suburban around the big cities, so the question is how to balance between different original areas services, “Urban- rural integrated planning is to regard economic and social development in urban and rural areas as a whole for uniform planning from the integrated situation of national economic and social development and make integrated research and integrated solution to the existing problems and their interrelationship in urban and rural areas so as to change the urban-rural dual structure gradually and establish an equal and harmonious urban-rural relationship under marketing economy.

**II. LITRETURE STUDY**

The purpose of this paper is to give a comprehensive overview of the role that urban planning plays in people's daily lives. Urban planning is first examined in relation to city health planning in order to gain a greater understanding of it. Second, this planning concept's emergence and relationships with other cities are depicted. Finally, the report's finding topic has been chosen to be the positive and negative effects of economic developments on urban planning. Additionally, it has been shown in this research that the popularity of this planning approach is growing every day. However, many who reside in slums continue to oppose this planning system for a variety of reasons, such as the fact that they are unable to build new homes for themselves due to financial hardships. As a result, it is indicated throughout the findings section that urban planning is an emerging necessity for cities, people, and the environment, and that these workings should be done concurrently with urbanization in cities. The advantages of urban planning are examined in this article using data from many sources. Urban planning has emerged as a recent trend in both industrialized and developing nations in the twenty-first century. First of all, it is understood that urban planning makes changes on urban environment such as controlling the waste management and providing the urban area with a healthier atmosphere. Secondly, by using the urban area efficiently urban planning is not only protecting the environment but also protecting the lives of the urban inhabitants, for example, it prevents dangerous floods with forests around the city. Thirdly, while urban planning or in other words city planning has positive effects on the environment, it also has a big role for the urban economy. By protecting the values of the urban environment and urban values, urban planning aims to give an increase on the urban economy such as rising the tourist attraction on the city by protecting its values. Finally, if the governments work with the international environment agencies, urban planning can get a better increase and popularity in our lives. Consequently, to protect the environment, to protect the urban inhabitants and to supply the urban economy, master planning or city planning is an essential solution for both cities and suburbs and also for their inhabitants.

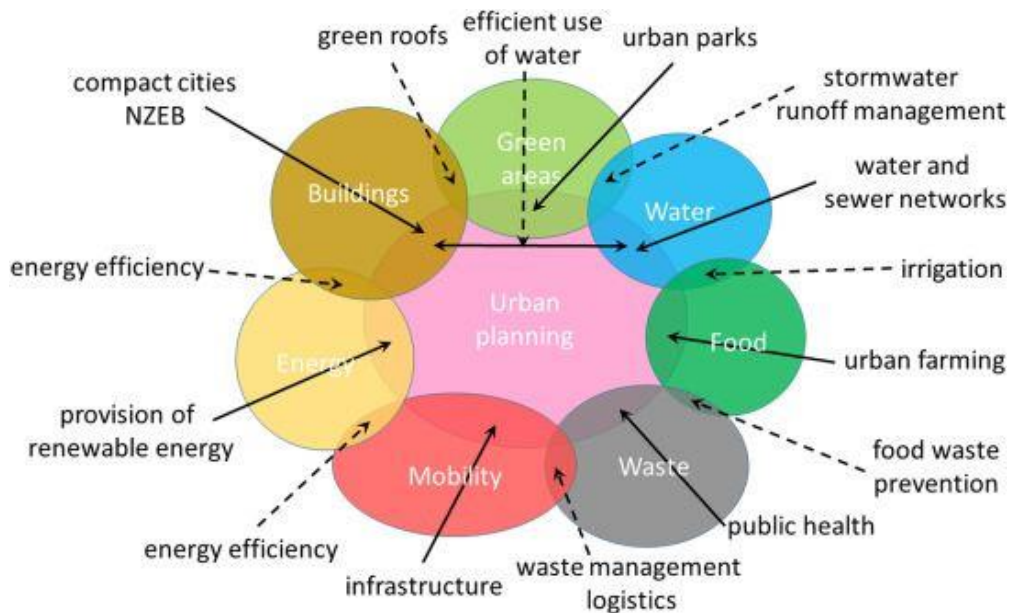

**III. CASE STUDY**

This paper will discuss the relationship between the urban planning and others such as management, sociality, economy and environment, and planners should know all this knowledge to be able to deal with different aspects of this environment. The question is how to balance the services provided by various original areas with the growth of new areas that are small cities or suburbs of large cities. "Urban-rural integrated planning is to regard economic and social development in urban and rural areas as a whole for uniform planning from the integrated situation of national economic and social development and to make integrated research and integrated solutions to the existing problems and their interrelationship in urban and rural areas in order to gradually change the urban-rural dual structure and establish an equal and harmonious urban-rural relationship under marketing." At the end the paper is focusing on how to improve the system in the world in urban planning, and it approves the connection between some fields and the opportunity of respecting to deal with several majors in the same time. this paper the paper linked in one side how to improve decision making about rural lands that requires careful consideration. At the end, the paper turned around the core of urban planning, and how to be linked with different fields such as Economy development, environment protection, social equity and management quality. Thus, the paper has reached to main points that one of them it is still necessary to keep our system under control. It is more precisely gathering all factors under on cover to be more efficient. Nothing important than keeping these lands that have been seen and cities to be the place where the people can find their life.

**IV. TABLE OF ANALYSIS**

PARAMETERS	LITERATURE STUDY	CASE STUDY
Topic	Urban Planning	Urban Planning Management
Aim	Give a comprehensive overview of the role that urban planning plays in people's daily lives. Urban planning is first examined in relation to city health planning in order to gain a greater understanding of it.	Discuss the relationship between the urban planning and others such as management, sociality, economy and environment, and planners should know all this knowledge to be able to deal with different aspects of this environment
Objective	<ul style="list-style-type: none"> <li>•Urban planning with respect to city health planning.</li> <li>•The relationship of city health plans to other city planning.</li> <li>•Urban planning for environment.</li> <li>•The effect of economic changes on urban planning.</li> </ul>	Build a model with factors: Quotes for references: 1.Economic development 2.Environmental Protection 3.Social Equity 4.Management Quality
Conclusion	To begin with, it is acknowledged that urban planning affects the urban environment by controlling waste	The focus of the paper ultimately turned to urban planning's

	<p>management and generating a better atmosphere. Second, good urban planning safeguards not just the environment but also the lives of city dwellers. For instance, by maintaining woods around the city, it prevents dangerous floods. Thirdly, even while city planning, also known as urban planning, has a good impact on the environment, it also plays a significant role in the urban economy. Urban planning strives to boost the urban economy by safeguarding the city's values while also protecting the values of the urban environment.</p>	<p>fundamental principles and how they relate to other areas including economic growth, environmental protection, social equality, and management quality. The paper has so arrived at its key conclusions, one of which is that it is still vital to maintain the stability of our system. To be more effective, it is carefully gathering all components under one roof. There is nothing more crucial than preserving these previously inhabited areas and urban centers as places where people can live a normal existence.</p>

### V. CONCLUSIONS

This research paper's primary goals are to examine the role that urban planning plays in people's lives and to comprehend the issues that individuals encounter. Without proper planning, urbanization cannot be a solution to meet people's demands because it may result in a brand-new issue like urban sprawl. Urban- rural integrated planning is to view economic and social growth in urban and rural areas as a whole for consistent planning. The issue is how to balance between distinct original areas services
